EASi Software Release Adds Functionality and Convenience

Web-based Software Eliminates Need for Internal IT Support

Pleasanton, CA – June 10, 2008 –Equity Administration Solutions, Inc. (EASi), today announced it has released the latest version of its web-based enterprise equity compensation management software which includes five significant upgrades and more than 125 enhancements.

“We pride ourselves on listening to our customers and continue to make our EASi software more robust in response to market requirements. Through a combination of major releases and periodic service packs we continuously improve our “always current” web-based software,” explained Vito Palmieri, CEO of EASi.

The new version of the software features a document library that lets customers control document access and provide participants with a central, web-based location where they can log in and review the PDF form of materials the administrator has posted, including plans, educational material, forms and private documents meant for a single individual.

EASi has also introduced batch reporting which allows designated users to queue up reports in a batch, select Summary Only, CSV and/or PDF format, submit the batch for overnight processing and retrieve the completed documents from a secure FTP site.

Stock Plan Administrators now have greater flexibility in handling termination provisions for all award levels. For each termination reason and each award type, EASi customers now have the ability to set the automated cancellation or acceleration of unvested shares upon termination. Parameters are set up for each Plan, and details are maintained and may be overridden for individual grants. It is also possible to set expiration dates for grants in months and years and to designate an offset of plus or minus a specified number of days.

EASi added Residence Address, Business Address, Home Country and Host Country to the Tax Item configuration to provide for the application of multiple tax jurisdictions when calculating a participant's taxes for a given taxable event.

EASi also made ISO 6039 reporting for participants easier by revising its Exercise Gain report.

Equity Administration Solutions, Inc. sells industrial strength stock plan expensing software designed to handle the accounting, tax and administration needs of public and private companies that grant equity awards. Headquartered in Pleasanton, CA, EASi delivers the most complete FAS123R solution available; addressing valuation, expensing, tax, dilution and disclosure.
